

Artificial Intelligence (AI) & Automation

Let Tech Do the Repetitive Work So You Can Focus on Closing Deals

📌 Introduction to AI & Automation

This lesson explores how AI (Artificial Intelligence) and automation can help you grow your real estate business faster and more efficiently—even with limited time. Whether you're working full-time or managing multiple responsibilities, these tools let you stay active with sellers and leads while keeping your business organized and consistent.

You'll learn what AI and automation are, how they support your lead generation, what tools are beginner-friendly, and how to take your first step with confidence.

✅ What to Expect and How It Works

This lesson covers:

- What AI and automation mean in real estate
 - Why these tools help with follow-up, outreach, and organization
 - What tasks you can automate right away
 - Tools that help, even if you're not tech-savvy
 - A sample workflow and a beginner challenge
-

📌 Free Up Time While Staying Consistent

- Leads won't wait—automation follows up fast when you can't
- AI helps you write messages, emails, and scripts in seconds
- Lead scoring tells you who's most motivated
- You stay in control—tech just makes it faster and easier

 Example: A seller submits your form at 9 p.m. Your system replies instantly and schedules a call—while you're asleep.

📌 Who Is This Strategy Best For?

- Works even if you're not tech-savvy
- Ideal for part-time investors or those with limited time
- Best used with:

- ✓ A CRM (like REI BlackBook)
- ✓ A dialer (Smartphone, Mojo, etc.)
- ✓ \$50–\$150/month software budget
- ✓ 2–3 hours to set up
- ✓ A lead source like Deal Driven

📌 What Can You Automate?

- Auto-reply texts using GoHighLevel, REI BlackBook, or Textedly
- Email sequences with Mailchimp or GoHighLevel
- Lead routing to your VA or CRM using Zapier
- Pre-screening forms with Google Forms, Typeform, or REI BlackBook
- Chatbots using ManyChat or GoHighLevel
- Follow-up message creation with ChatGPT

📌 These tools reduce repetition and keep leads moving forward.

📌 Example Workflow for a Beginner

- Step 1: A seller clicks on your ad or fills out your form
- Step 2: Your CRM immediately tags them and sends a thank-you text
- Step 3: If there's no reply, a reminder is sent the next day
- Step 4: Your VA gets notified to follow up
- Step 5: The system sends the seller a Calendly link to book a call

📌 This all runs in the background once it's set up—and that means less work for you.

📌 What Tools Can Help You Do This?

- REI BlackBook – CRM, texting, workflows
- GoHighLevel – full automation system
- Zapier – connects your apps
- ChatGPT – quick copywriting for texts/emails

- Calendly – for booking calls
- Google Forms or Typeform – free seller forms

Start with one tool and build as you grow.

Example – Use ChatGPT to Write a Seller Text

Prompt:

"Write a short, friendly text asking a homeowner if they'd consider selling 123 Main St for cash, as-is, with closing costs covered."

ChatGPT Response:

"Hi John, this is Pete! I was wondering if you'd consider a cash offer on your property at 123 Main Street? No repairs needed—we buy as-is and cover closing costs. Let me know if you're open to chatting!"

 You can send it as-is or tweak it to match your voice.

Benefits and Limitations of AI & Automation

- ✓ Works 24/7
- ✓ Keeps follow-up consistent
- ✓ Saves hours weekly
- ✓ Makes your business look more professional

- ⚠ Takes time to set up
 - ⚠ Some tools require tutorials or testing
 - ⚠ Still needs your input to close deals
-

Student Challenge – Try One AI or Automation Step

Choose one to try this week:

- Set up Calendly → calendly.com
- Build a Google Form → forms.google.com
- Write 3 follow-up texts in ChatGPT → chat.openai.com
- Watch a tutorial on REI BlackBook → reiblackbook.com/tutorials
- Search "GoHighLevel real estate" on YouTube

 Pick one tool. Explore it. Test it. Take one smart step forward.

Key Takeaways

- AI and automation aren't just smart—they're time savers
 - You stay in charge—tech handles the follow-up
 - With tools like REI BlackBook, ChatGPT, or Zapier, you can create systems that work 24/7
 - Start small. Automate one thing. Build from there
-

In Closing

Try one small automation step this week. If it works—great. If not—explore the next lesson in your course.

You're building your business your way—with tech, tools, and Partner Driven by your side.
